

ChimeNet has been **securing and transporting** sensitive data for decades and fully understands the challenges businesses face and the cost of not getting it right.

Network Security

ChimeNet's fully managed network security solutions meet the specific needs of each client. ChimeNet focuses primarily on effective network defense strategies, LAN and WAN perimeter protection for both wired and wireless networks, effective firewall policy enforcement, intrusion detection, and web filtering capabilities. Businesses can enjoy peace of mind knowing that firewalls and network security devices are securely "locked down," and only trusted traffic is allowed to enter and exit the network. ChimeNet's IT security managed services will meet or exceed network security requirements.

The potential for extended network outages, application performance issues, and data security breaches have required companies to seek out experienced network security experts whom they can count on and trust – ChimeNet is that partner.

ChimeNet's trained, certified technicians are available 24/7 to assist with any network security needs.

ChimeNet Offers:

- Certification and expertise with Cisco Adaptive Security Appliance (ASA) procurement, installation, configuration and on-going Managed Firewall support
- Cisco Firepower® NGFW (next-generation firewall). The industry's first fully integrated, threat-focused next-gen firewall with unified management.
